# Coronavirus Disease 2019 (COVID-19), Influenza, & Respiratory Syncytial Virus (RSV)

Updated weekly on Tuesdays, and current as of 3:00 p.m. on the date it was posted.

**Note:** *As of October 17, 2023 this document will include updates for other respiratory diseases of public health concern, primarily influenza and respiratory syncytial virus (RSV).*

*Additionally, the “Guidelines and Technical documents” section [last updated July 26, 2023] will no longer be updated, but is archived as an appendix at the end of this document.*

*Moving forward, any news and guidance updates will be cycled through the [New Content](#) section below, as always with the dates of the latest additions **bolded**.*

This document is a collation of resources for your reference. For official guidance on COVID-19, Influenza, and RSV in Ontario, please visit the [Ministry of Health](#) ( [COVID-19](#) | [The Flu](#) | [RSV](#) ).

- [Overview of respiratory virus epidemiology in the EU/EEA weekly overview \(week 20, 2024\)](#) [05-21-2024]

*ECDC and the WHO Regional Office for Europe have jointly developed the European Respiratory Virus Surveillance Summary (ERVISS)*

- Syndromic surveillance in primary and secondary care indicates that respiratory activity continues to decrease and has returned to baseline levels in the majority of EU/EEA countries.
- Seasonal influenza activity at the EU/EEA level remained stable at low levels in almost all EU/EEA countries.
  - For nine consecutive weeks, the primary care pooled test positivity at the EU/EEA level has remained below 10%. Similarly, the pooled test positivity in secondary care was below 10% and has been so for eleven weeks.
  - Most countries report baseline or low levels of influenza intensity and only one country continues to report widespread geographical spread.
- SARS-CoV-2 activity remained low in all reporting EU/EEA countries, albeit individual countries showed slight increases in detections from very low levels.
- Respiratory syncytial virus (RSV) activity remained low in all reporting EU/EEA countries.
- Due to a lower number of countries reporting in the reporting week and the overall low testing volumes in primary care sentinel sites, an assessment of the epidemiological situation for the EU/EEA is increasingly challenging and data should be interpreted with some caution.
