

AT A GLANCE

04/02/2024

Coronavirus Disease 2019 (COVID-19), Influenza, & Respiratory Syncytial Virus (RSV)

Updated weekly on Tuesdays, and current as of 3:00 p.m. on the date it was posted.

Note: *As of October 17, 2023 this document will include updates for other respiratory diseases of public health concern, primarily influenza and respiratory syncytial virus (RSV).*

Additionally, the “Guidelines and Technical documents” section [last updated July 26, 2023] will no longer be updated, but is archived as an appendix at the end of this document.

*Moving forward, any news and guidance updates will be cycled through the [New Content](#) section below, as always with the dates of the latest additions **bolded**.*

This document is a collation of resources for your reference. For official guidance on COVID-19, Influenza, and RSV in Ontario, please visit the [Ministry of Health](#) ([COVID-19](#) | [The Flu](#) | [RSV](#)).

 - [Overview of respiratory virus epidemiology in the EU/EEA weekly overview \(week 11, 2024\) \[03-19-2024\]](#)
- ECDC and the WHO Regional Office for Europe have jointly developed the European Respiratory Virus Surveillance Summary (ERVISS)*
- Syndromic surveillance in primary and secondary care indicate that respiratory activity is decreasing but remains above baseline levels in under half of reporting EU/EEA countries. The activity is largely driven by influenza.
 - All indicators pointed to elevated but decreasing influenza activity in the EU/EEA.
 - At the EU/EEA level, a decreasing trend in pooled sentinel primary care positivity for influenza has been observed since week 4, 2024, although the majority of reporting countries remained above the 10% positivity threshold for influenza.
 - The majority of countries now report medium or low levels of influenza intensity, widespread but decreasing geographical spread, and baseline rates of influenza-like illness (ILI). Stable or decreasing trends in indicators of activity and severe disease were also observed in most reporting countries.
 - A(H1)pdm09 continues to be the most commonly detected virus in the EU/EEA. Influenza B is now dominant in five countries although the number of influenza B detections remain low overall.
 - Interim influenza vaccine effectiveness estimates for the 2023–2024 season indicate that up to 53% and 44% of vaccinated individuals in primary care or hospital settings, respectively, were protected against mild and severe influenza.
 - RSV activity continued to decrease to low levels at the EU/EEA level and in most reporting countries.
 - SARS-CoV-2 activity remained low in all EU/EEA countries.

- [WHO Director-General's video message at WHO Civil Society Commission first annual general meeting – 26 March 2024](#) [03-26-2024]
 - “One of the most important lessons of the COVID-19 pandemic is that civil society organizations play a vital role in supporting the communities they represent to protect and promote their own health, based on reliable information. That’s especially true of the pandemic agreement that WHO’s Member States are negotiating as we speak. As you know, just as the response to the COVID-19 pandemic was hampered by mis- and disinformation, so are the negotiations on the pandemic agreement. I’m sure you are aware of some of the lies being spread about the agreement: that it’s a power grab by WHO that will cede national sovereignty to WHO and give it the power to impose lockdowns or vaccine mandates on countries. These claims are completely false. In fact, the draft agreement says explicitly – in Article 24, paragraph 3 – that the pandemic agreement will not give WHO any power to dictate or change the laws or policies of any country, nor to impose vaccine mandates or lockdowns. We cannot allow this historic agreement to be sabotaged by those who spread lies, either knowingly or unknowingly. We need your help, both to advocate for the agreement, and to counter the mis- and disinformation against it – especially in the communities you represent. If that happens, we may lose the opportunity to put in place an agreement to protect future generations from the impact of pandemics.”
